5 March 2018

Dear President,

Review of the vehicle safety and pedestrian safety regulations

We understand that the European Commission will present a proposal for the revision of the General Safety (661/2009/EC) and Pedestrian Safety (661/2009/EC) Regulations on 2 May, as part of the third mobility package. In the context of the upcoming European Parliamentary elections, we urge you to ensure the Parliament does its utmost to deliver a strong and timely position on these critical regulations for road safety.

The European Commission reported that over 25,500 people lost their lives on EU roads in 2016 - a figure that has hardly budged in three years. A further 135,000 people are seriously injured each year. It is a devastating human toll but also an important economic one.

Improved minimum vehicle safety standards are absolutely critical to reducing deaths and serious injuries on Europe’s roads. We therefore welcomed the strong position taken by the European Parliament in its Resolution (2017/2085(INI)) in response to the plans outlined by the Commission in the document Saving Lives: Boosting Car Safety in the EU.

Consumers may think that all new cars sold on the EU market are as safe as possible because they have to meet EU requirements. But a car that only meets the current legal minimum standards would receive a zero-star rating today from Euro NCAP. While many cost-effective and proven safety technologies are available on the market, have been recognised by programmes such as Euro NCAP and are already delivering real safety benefits, the needed step-change will only come when they are offered as standard, not as an optional extra or only on premium models.

Europe needs to catch up with global developments emerging in the field of vehicle safety. South Korea recently announced that it will require all new passenger vehicles to be fitted with Automated Emergency Braking and Lane Departure Warning systems from January 2019, while India will leapfrog Europe’s current requirements on seatbelt reminders in July 2019.

The swift adoption of ambitious safety standards will therefore help the European automotive industry to maintain their global lead in safety technology. Making driver assistance technologies standard will furthermore help prepare for the safe introduction of automated driving.

EU vehicle safety standards were last updated almost a decade ago. With 70 deaths every single day on our roads, we cannot afford to wait any longer for these long overdue changes.

Yours sincerely,
Antonio Avenoso, Executive Director
European Transport Safety Council

Eduardo Chagas, General Secretary
European Transport Workers’ Federation

Sigrid de Vries, Secretary General
CLEPA, European Association of Automotive Suppliers

Bernhard Ensink, Secretary General
European Cyclists’ Federation

Eduard Fernández, Executive Director
CITA, International Motor Vehicle Inspection Committee

Lauretanne Krid, Director General
Fédération Internationale de l’Automobile (FIA) Region I

Jeannot Mersch, President
FEVR, European Federation of Road Traffic Victims

Ruth Purdie, General Secretary
TISPOL, the European Traffic Police Network

Stephen Russell, Secretary General
ANEC, the European consumer voice in standardisation

Ciaran Simms, President
International Research Council on Biomechanics of Injury
